

**New Forest Life**  
PARTNERSHIP

Through re-connecting the rivers with their floodplain, and restoring natural processes, the project has begun to create suitable conditions for the creation of significant further areas of riverine and bog woodland.

English Nature has played an active role in the Water Basin Management Forum, and is pleased to see the continuation of the Forum beyond 2006. The detailed Wetland Management Plan is an additional mechanism which will help to ensure the integrated management and long term sustainability of the six water basins within the New Forest SAC, and compliments the comprehensive management plan prepared by EN as part of the previous Life 2 project.

Therefore English Nature is happy to endorse the Life 3 project and confirm that the objectives and key deliverables/outputs have been met.

Yours sincerely,

Russell Wright  
Deputy Team-Manager  
English Nature (Hampshire & IOW Team)
